

**Our research is about trying to bring  
high blood pressure down to Earth.**

We are conducting a clinical research study for adults with high blood pressure to evaluate the effects of an investigational combination of two study medications on high blood pressure compared to each study medication taken alone.

You may be able to participate in this study if you:

- Are at least 18 years old
- Have been diagnosed with or currently have high blood pressure
- Do not have congestive heart failure

If you qualify and choose to participate, you will be asked to make weekly clinic visits during the study. All study-related medical exams, laboratory tests, and study medication will be provided to qualified participants at no cost. For more information, please contact:
